**INSTALLATION of 2 DEPOSUN FLAT-TOP 550 sun pipes to lighten the office-kitchen in a penthouse duplex in Llauder street, Barcelona.**

ARCHITECT:	PEY Arquitectes
LOCATION:	Barcelona
DATE:	October 2007
REF:	OFT · 1420 · 07

In this duplex **PENTHOUSE** located in Llauder street in Barcelona we installed 2 DEPOSUN FLAT-TOP 550 sun pipes leveled with the terrace pavement. Light is transported through the reflective pipe and lightens widely the office-kitchen located in the lower floor and doesn't have any window. The result is a pleasant luminosity feeling and a sensation of connection with the exterior, thanks to daylighting.

Skylights capture sun light and are perfectly leveled with the pavement.

FLAT-TOP dome advantage is its light capture capacity without interrupting the pavement continuity. It doesn't affect the terrace use. Glasses can be prepared even to resist vehicles passage.

NATURAL LIGHT enters widely through sun pipes and is distributed in the office-kitchen through the diffuser in the ceiling.

THE RESULT is a very lighted space, connected with the exterior thanks to daylighting.

For information (+34) 934090359 or visit [www.espaciosolar.com](http://www.espaciosolar.com) and discover the possibilities of sun pipes, solar reflectors, optic fiber systems, or our high performance skylights. We work to make **your projects shine**.
