

DEPOSUN GLASS-TOP 550 SUN PIPES INSTALLATION TO LIGHT A CORRIDOR IN A SORLI DISCAU SUPERMARKET

LOCATION: Sant Vicenç de Montalt

CLIENT: SORLI DISCAU

REF: SORLI DISCAU

Because of the increase in energy costs , some big facilities like supermarkets with high electric demand for their running, are becoming aware of the advantages of installing energetic savings systems.

Expansion and projects department of **SORLI DISCAU**, with Espacio Solar projected the installation of 8 **DEPOSUN GLASS TOP 550** sun pipes to give light to a corridor that is also used as entrance hall to their new shop located at Sant Vicenç de Montalt.

The owners wanted to have the correct light for this space, which will give their clients a better lighting comfort and at the same time to have energetic savings in this new centre. Both things are obtained thanks to the use of **DEPOSUN** sun pipes.

By using those systems in supermarkets we also get better environmental results of the whole process and help to make users aware of the importance of shopping at environmentally friendly spaces.
