

Installation of transitables FLAT TOP to light an underground space under PUBLIC GARDENS in Barcelona.

CONSTRUCT :	DRAGADOS
DATE:	2008
REF:	CLABSA

Barcelona City council and the company CLABSA projected together the renovation of several degraded areas in the city changing them into pleasant public gardens which under their ground store part of the machines used for the city cleaning.

Espacio Solar together with the environmental area architects studied and planned the use of our walk trough flat top domes in those public gardens. They let people walk around without interfering because of its non slip treatment and as well capture and redirect daylight into those parking sites, and make them more sustainable.

For information (+34) 934 090 359 or visit www.espaciosolar.com and discover the possibilities of sun pipes, solar reflectors, optic fiber systems, or our high performance skylights. We work to make your projects shine.
